Fact Sheet

The BeCare MS Link is the most comprehensive, remote assessment with quantitative neurologic measures to detect changes and monitor neurologic status over time.

Patients with Multiple Sclerosis (MS) can conduct their own neurologic assessments based on objective measures from the palm of their hands, as the mobile app mimics in-person clinical examinations.
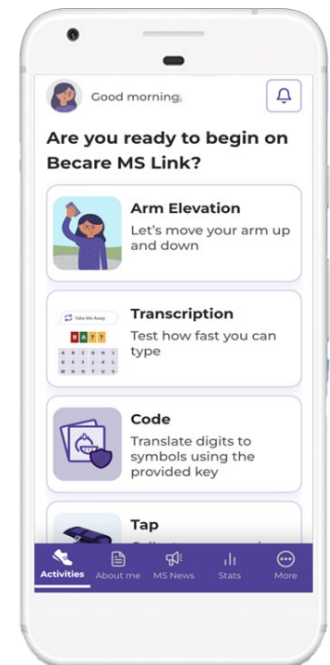

The BeCare MS Link addresses the growing crisis of accessibility to quality neurologic care due to:
- Shortage of physicians
- Increased demand for neurologists
- Increased wait times and appointments
- The inherent subjectivity of neurologic exams
- Diminishing treatment resources affecting all neurologic patients

The BeCare MS Link solution addresses clinicians' and patients' unmet needs by providing remote comprehensive, timely data to help monitor and improve care.

Using the BeCare MS Link
1. Download the app from the Google Play store or the App Store.
2. Create a user ID and login.
3. Complete background questions about health history and quality of life.
4. Perform 13 gamified activities to assess your motor skills, ambulation, sensation, vision, cognition, and speech patterns. Completing the questionnaire and assessments should initially take 30 minutes.
   - It is recommended to complete all activities within four days to calculate a score and capture an accurate snapshot.
   - Users should complete the assessments 48 hours before their next appointment with a healthcare provider.
   - Users should complete the activities monthly or as symptoms change to keep track of disease progression by assessing multiple aspects of neurologic function.
5. Completing the activities on a mobile phone generates highly precise, quantifiable data about the user's MS status.

Technology
BeCare Link uses a proprietary, patented machine-learned technique for generating gold-standard disability scores using data supplied by the BeCare MS Link mobile app.

The FDA and Health Canada have cleared the BeCare MS Link mobile app. The mobile data is encrypted, and transmission is HIPAA compliant. In addition, validation studies with Weil Cornell and Yale School of Medicine confirm that the AI-generated BeCare MS Link score is concordant with the disability scores generated in clinics by a healthcare provider.
